Pap tests undertaken by nurse by practice/organisation type

![Bar chart showing Pap tests undertaken by nurse by practice/organisation type from 2006 to 2011. The chart includes data for General Practice, Community Health, Women's Health Services, Sexual Health, and Other (e.g., Hospital and dysplasia clinics).]
Nurse Quality - endocervical component
Key nurse statistics

- Nurses take 38.3% of Pap tests for women 50 years plus compared to 31.5% for all Victorian providers.

- 66% of Pap tests taken by nurses are for women who it has been at least 2 years since their last test, compared to 57.9% for all Victorian providers.
Supporting your recredentialling

Pap test quality:
If nurses are requested to undertake a peer education session nurses are asked to select their own educator – this nurse does not necessarily need to be a preceptor.

Contacting VCS Liaison Physicians or Sandy if you are have any concerns with your progress before recredentialling.

ATSI, country of birth & language spoke at home benchmark:
Nurse who do not reach the benchmark when recredentialling after 1 January 2012 will be supported by either or both a ATSI, COB or LSH education support.
Nurses with 15 of less Pap tests will receive a support letter
Name of Nurse cervical screening provider:
Organisation:
Location:
Data collection start date: 10/07/2012
Data collection end date: 31/12/2012

To successfully complete this form please fill in all the fields available. Please note Women’s ID number is an optional field and should be filled if the woman’s ID number is available. At the end of each 6 month period please save this spreadsheet and email it to the Credentialed Secretariat at: credentials@papscreen.org.au

Your Average Percent
- Women aged under 35 yrs with endocervical component
- Women aged 35 yrs & over with endocervical component
- % of ATSI identification question answered.
- % of CALD identification questions answered - COB.
- % of CALD identification questions answered - LSB.

The average endocervical component capture rate for users of Victorian Cytology Service between 1 Jan - 30 June 2012 was:
- For women aged 50 years of age: 78.5%
- For women aged over 50 years of age: 70.1%

If your average endocervical component capture rate remains below the average benchmark please do not wait until your recredentialed is due. You can contact Sandy Anderson, Credentialed Nurse Coordinator, PapScreen Victoria on 0467 190 207 or email Sandy at sandya@vccal.org.au for clinical support.

Pap Test Result Codes: Negative, Possible Low Grade Abnormality, Low Grade Abnormality (e.g. HPV, COB), Possible High Grade Abnormality, High Grade Abnormality (e.g. CIN2, CIN3, Cancer), Unsatisfactory

Note: The Date of Pap test and Date of Birth fields are mandatory. Fields & must be entered into the Date column using the format DD/MM/YY.

Nurses collection of ATSI, COB and LSH during 2011
NSCP working in Aboriginal Health Services network

- Work underway to establish a Nurse Cervical Screening Provider (NCSP) working in AHS network
- A small number of NSCPs meet to discuss how the group may function and enjoyed the Long Walk Women’s Luncheon
- Currently building a broader contact list to increase consultation with nurses

To be involved please contact - Kylie Johnson or Leanne Bird (Aboriginal Education Program Coordinator)
Every woman, every two years.

Most women diagnosed with cervical cancer haven’t had regular Pap tests - also known as Pap smears.

Pap tests. A little awkward for a lot of peace of mind.

Check Out Our New Campaign Here

Cervical cancer prevention just got a bit sexy.

News

Nurse cervical screening providers update
Presentations following the Nurse Cervical Screening Providers Metro PD Workshop from Friday 26 October 2012 are now available.

CASA Forum endorsed nurse cervical screening providers
A list of nurse cervical screening providers with training/experience in working with victim/survivors of sexual assault is now available. Women who are victim/survivors of sexual assault are able to use the list to find a provider in their area who can provide a sensitive screening service.

Cervical Cancer Prevention Clinical Audit
PapScreen is inviting all cervical screening clinics to register their interest in undertaking a Cervical Cancer Prevention Clinical Audit. The audit is a six-month quality improvement program designed to help practitioners identify gaps within their practice and implement strategies to strengthen service delivery. For more information contact Harriet Wynne on harriet.wynne@cancervic.org.au or 9635 5024.

Update your clinic details
Please support us by providing or updating your clinic’s details, to make sure every Victorian woman has accurate information about where they can access Pap tests. If you have any problems updating your details, or don’t have your clinic ID code, please contact Harriet on 03 9635 5024 or harriet.wynne@cancervic.org.au
